

Submission Worksheet

Submission Data

Course: IT202-010-S2026

Assignment: Milestone 2 API Testing

Student: Pratik P. (pbp5)

Status: Submitted | **Worksheet Progress:** 100%

Potential Grade: 10.00/10.00 (100.00%)

Received Grade: 0.00/10.00 (0.00%)

Started: 4/13/2026 3:26:53 PM

Updated: 4/20/2026 5:09:18 PM

Instructions

• Overview Link: <https://youtu.be/86v8Ak0E3XE>

1. Ensure you read all instructions and objectives before starting.
2. Ensure you added your API choice to the Google doc shared on Canvas (selections must be unique, no two students can use the same exact API)
3. Create a new branch from Milestone2 called M7-Homework
 1. `git checkout Milestone2` (ensure proper starting branch)
 2. If you don't have Milestone2 yet, create it from Milestone1
 3. `git pull origin Milestone2` (ensure history is up to date)
 4. `git checkout -b M7-Homework` (create and switch to branch)
4. Follow the lesson from
 - Add `testApi.php` to your project folder
 - Immediately record to history
 - `git add public_html`
 - `git commit -m "adding M7 HW baseline files"`
 - `git push origin M7-Homework`
 - Create a Pull Request from M7-Homework to Milestone2 and keep it open
5. Fill out the below worksheet
 - Ensure you add the UCID/Date and details comments as you work
 - Get the example working with your chosen API
6. Once finished, click "Submit and Export"
7. Locally add the generated PDF to a folder of your choosing inside your repository folder and move it to Github
 1. `git add .`
 2. `git commit -m "adding PDF"`
 3. `git push origin M7-Homework`
 4. On Github merge the pull request from M7-Homework to Milestone2
 5. On Github create and merge the pull request from Milestone2 to qa
 6. On Github create a pull request from qa to prod and immediately merge. (This will trigger the prod deploy to make the Render.com prod links work)

8. Upload the same PDF to Canvas

9. Sync Local

1. git checkout qa
2. git pull origin qa
3. git checkout Milestone2
4. git pull origin Milestone2

Section #1: (2 pts.) Analyze Api Choice

Progress: 100%

⇒ Task #1 (0.40 pts.) - API Link

Progress: 100%

URL #1

<https://rapidapi.com/wirefreethought/api/geotlb-cities>

URL
<https://rapidapi.com/wirefree>

Saved: 4/13/2026 3:26:53 PM

⇒ Task #2 (0.80 pts.) - Quota and Limitations

Progress: 100%

Details:

- Note: Hard limits stop when reached, soft limits incur costs when reached (and need a valid credit card associated)
- It's recommend to use a free API with hard limits over one with soft limits, but be mindful of the quota value as it's easy to waste it (through the site's dashboard and/or your own code)

Your Response:

Hard Limit: 1000/Day Rate Limit 1 requests per second

Saved: 4/13/2026 3:30:02 PM

⇒ Task #3 (0.80 pts.) - Goal Data

Progress: 100%

Details:

- Clearly note what type of data you'll be using
- Clearly note the specific properties you intend to use (it's likely not all of them)

Your Response:

 Saved: 4/20/2026 4:29:48 PM

Progress: 100%

Progress: 100%

- The code will need to be adjusted since your API differs from the one I chose
- You'll need to apply the API `.env` items to Render.com's Environment variables both on `qa` and `prod`
- Be mindful of your API quota (may need to initially use a cached response until you get it working, refer to the lessons for this)

Progress: 100%

1. Snippet of relevant code showing solution (with ucid/date comment) 2. Don't show any private details like the API key
2. Full output of executing the `testApi.php` (visit the proper file on Render.com qa after a manual deploy)

code p1

[illegible]

Briefly explain how your solution works. Describe the logic, steps, or decisions your code makes to reach the result. Do not restate the problem or list requirements.

Your Response:

This testApi-cities.php was mainly based on the professor's testApi-stocks.api example. Vraibel such as the endpoint, rapidApiHost, data, and result were changed in order to fit the API I chose. The API key was added to the env file as well as the load_api_keys.php file. Cities searches for a namePrefix enter in by the user and outputs relevant cities with the relevant prefixes.

Section #3: (2 pts.) Misc

Progress: 100%

☰ Task #1 (0.67 pts.) - Github Details

Progress: 100%

Part 1:

Progress: 100%

Details:

From the Commits tab of the Pull Request screenshot the commit history Following minimum should be present

commits

Saved: 4/20/2026 5:06:20 PM

⇒ Part 2:

Progress: 100%

Details:

Include the link to the Pull Request (should end in `/pull/#`)

URL #1

UHI

<https://github.com/pbp965/pbp5->

Task #2 (0.67 pts.) - WakaTime - Activity

Progress: 100%

Details:

- Visit the WakaTime.com Dashboard
- Click **Projects** and find your repository
- Capture the overall time at the top that includes the repository name
- Capture the individual time at the bottom that includes the file time
- Note: The duration isn't relevant for the grade and the visual graphs aren't necessary

Task #3 (0.67 pts.) - Reflection

Progress: 100%

Task #1 (0.33 pts.) - What did you learn?

Progress: 100%

Details:

Briefly answer the question (at least a few decent sentences)

Your Response:

Fetching data from an API using specific queries and being able to display said data

Saved: 4/20/2026 5:07:42 PM

⇒ Task #2 (0.33 pts.) - What was the easiest part of the assignment?

Progress: 100%

Details:

Briefly answer the question (at least a few decent sentences)

Your Response:

The easiest part of was implemting the testAPI.php as an exapmple was already given to use and we had to modify it to fit our specific API.

Saved: 4/20/2026 5:08:24 PM

⇒ Task #3 (0.33 pts.) - What was the hardest part of the assignment?

Progress: 100%

Details:

Briefly answer the question (at least a few decent sentences)

Your Response:

Picking the right API to use was probably the hardest part. I had to balance the amount of information that is shown and also the limits to how many request you can do within a day and the rate at which you can do them.
