

Submission Worksheet

Submission Data

Course: IT202-010-S2026

Assignment: IT202 Module 3 HTML, CSS, JS Challenges

Student: Pratik P. (pbp5)

Status: Submitted | **Worksheet Progress:** 75%

Potential Grade: 9.78/10.00 (97.80%)

Received Grade: 0.00/10.00 (0.00%)

Started: 3/2/2026 5:46:18 PM

Updated: 3/9/2026 5:53:17 PM

Instructions

- Overview Link: <https://youtu.be/Dyl6dg1Xybo> (older but should still help)
- 1. Ensure you read all instructions and objectives before starting.
- 2. Create a new branch from qa called M3-Homework
 - 1. `git checkout qa` (ensure proper starting branch)
 - 2. `git pull origin qa` (ensure history is up to date)
 - 3. `git checkout -b M3-Homework` (create and switch to branch)
- 3. Copy the template code from here: [GitHub Repository - M3 Homework](#)
 - It includes Challenges 1-3, `util.js`, and `styles.css`. Put all into an M3 folder or similar inside your `public_html`
 - Immediately record to history
 - `git add public_html`
 - `git commit -m "adding M3 HW baseline files"`
 - `git push origin M3-Homework`
 - Create a Pull Request from M3-Homework to qa and keep it open
- 4. Fill out the below worksheet
 - Each Problem requires the following as you work
 - Ensure there's a comment with your UCID, date, and brief summary of how the problem was solved
 - Update ucid in header tag
 - Code solution (add/commit periodically as needed) (style and/or script tags)
- 5. Once finished, click "Submit and Export"
- 6. Locally add the generated PDF to a folder of your choosing inside your repository folder and move it to Github
 - 1. `git add .`
 - 2. `git commit -m "adding PDF"`
 - 3. `git push origin M3-Homework`
 - 4. On Github merge the pull request from M3-Homework to qa
 - 5. On Github create a pull request from qa to prod and immediately merge. (This will trigger the prod

deploy to make the render prod links work)

7. Upload the same PDF to Canvas

8. Sync Local

1. git checkout qa
2. git pull origin qa

Section #1: (3 pts.) Challenge 1 - Fixed Header, Content, Footer

Progress: 100%

≡ Task #1 (3 pts.) - Edit the `style` and `script` tags to solve the challenge requirements

Progress: 100%

Details:

- Only make edits where noted via provided comments
- Update your ucid in the header tag
- #1 The header and footer should remain FIXED in place (top and bottom of page respectively)
- #2 The content area should SCROLL independently (nothing should be pushed off screen and the browser WINDOW scrollbar shouldn't appear)
- #3 The entire page should always take up the full viewport height
- #4 The borders around header,main,footer should remain intact and visible, this will help show that the challenges were solved correctly
- Add code to solve the problem (add/commit as needed)

Part 1:

Progress: 100%

Details:

Two screenshots are expected

1. Snippet of relevant code showing solution (with ucid/date comment)
2. Full output of executing the program (visit the proper file on render.com qa after a manual deploy) 1. Ensure url is visible in the browser's address bar

```
<style>
  /* You're free to make whatever edits you need here, just don't remove anything in the stylesheets
  /* See the requirements at the top. If easier, you may copy/paste them here */
  /* 07/07/2025 */
  body {
    height: 100%;
    margin: 0;
  }

  body.challenge1 {
    display: flex;
    flex-direction: column;
    height: 100%;
    overflow: hidden;
  }
  <!-- body.challenge1

  header, footer {
    flex: 0 0 auto;
  }

  main {
    flex: 1 1 auto;
    overflow-y: auto;
  }
</style>
```

Part 3:

Progress: 100%

Details:

Briefly explain how your solution works. Describe the logic, steps, or decisions your code makes to reach the result. Do not restate the problem or list requirements.

Your Response:

Header and footer stays fixed in their position and only main moves, overflow in the container hides the browser scroll bar, the height makes sure the whole page is always visible.

 Saved: 3/9/2026 5:42:16 PM

Section #2: (3 pts.) Challenge 2 - Header, Content, And Sidebars

Progress: 100%

≡ Task #1 (3 pts.) - Edit the `style` and `script` tags to solve the challenge requirements

Progress: 100%

Details:

- Only make edits where noted via provided comments
- Update your ucid in the header tag
- Using CSS, adjust the layout per the following
 - #1: Header is at the top
 - #2: Content takes up the rest of the height
 - #3: Both sidebars docked to the respective side and take up 15% width; Content area should utilize the remaining width
- Using JavaScript complete the following
 - #4: Attach the appropriate event listener to the buttons
 - #5: Individual toggle the respective panel between collapsed and uncollapsed (Don't lose the button in the process)
 - #6: The content should adjust based on the status of the respective sidebars (i.e., take up more left, right, or both space)
- Add code to solve the problem (add/commit as needed)

Part 1:

Progress: 100%

Details:

Two screenshots are expected

1. Snippet of relevant code showing solution (with ucid/date comment)
2. Full output of executing the program (visit the proper file on render.com qa after a manual deploy) 1. Ensure url is visible in the browser's address bar

```
<script>
  /* Solve the button logic here by finding and attaching an appropriate event listener and logic */
  /* pppp */
  /* 04/02/2020 */

  const leftSidebar = document.getElementById("left-sidebar");
  const rightSidebar = document.getElementById("right-sidebar");

  const leftButton = leftSidebar.querySelector("button");
  const rightButton = rightSidebar.querySelector("button");

  // toggle left sidebar
  leftButton.addEventListener("click", () => {
    leftSidebar.classList.toggle("collapsed");
  });

  // toggle right sidebar
  rightButton.addEventListener("click", () => {
    rightSidebar.classList.toggle("collapsed");
  });
</script>
```

Part 3:

Progress: 100%

Details:

Briefly explain how your solution works. Describe the logic, steps, or decisions your code makes to reach the result. Do not restate the problem or list requirements.

Your Response:

Flex-direction allows the header to remain at the top, the container uses flex to fill space, width is used within the sidebars and are set to 15% with main using flex to take up the rest of the space.

Section #3: (3 pts.) Challenge 3 - Carousel Layout With Swiping

Progress: 50%

Task #1 (3 pts.) - Edit the `style` and `script` tags to solve the challenge requirements

Progress: 100%

Details:

- Only make edits where noted via provided comments
- Update your ucid in the header tag
- Using CSS, adjust the layout per the following
 - #1 Header should be at the top
 - #2 Carousel should take up full width
 - #3 Buttons should be centered
 - #4 Carousel panels should fill the full height of the carousel
 - #5 Carousel content should be centered (vertical and horizontal)
- Using JavaScript complete the following
 - #4 Attach appropriate event listeners to each button
 - #5 Cycle through each panel, showing only 1 at a time
 - #6 Ensure that the panels loop when reaching the last or first one
- Add code to solve the problem (add/commit as needed)

Part 1:

zero credit if it does not)

- Direct link to the file on Render.com Prod (Grab the qa url you're testing, paste it, change "-qa" to "-prod"), zero credit if

≡ Part 3:

Progress: 100%

Details:

Briefly explain how your solution works. Describe the logic, steps, or decisions your code makes to reach the result. Do not restate the problem or list requirements.

Your Response:

Panels are placed horizontally with flex, each panel is shown one at a time, translateX is used to move the container and we track each panel's index.

Saved: 3/9/2026 5:49:20 PM

≡ Task #2 (+ 0.99 pts.) - Extra Credit - Challenge 7

Progress: 0%

Details:

- Allow mouse swipe on the carousel to cycle through the panels, similar to how the buttons would work

≡ Task #3 (0.33 pts.) - Reflection

Progress: 33%

⇒ Task #1 (0.33 pts.) - What did you learn?

Progress: 100%

Details:

Briefly answer the question (at least a few decent sentences)

Your Response:

In this assignment, I learned mutiple ways to iomplemnt scripts with JS and CSS style sheets in order to modify webpages. These challenegs were good practice in modifying webpages as well as implemnting features functions into buttons on a webpage.
