

Submission Worksheet

Submission Data

Course: IT202-010-S2026

Assignment: IT202 PHP Multi-Dimension Problems

Student: Pratik P. (pbp5)

Status: Submitted | **Worksheet Progress:** 100%

Potential Grade: 10.00/10.00 (100.00%)

Received Grade: 0.00/10.00 (0.00%)

Started: 3/28/2026 3:50:13 PM

Updated: 3/28/2026 4:18:19 PM

Instructions

- Overview Link: <https://youtu.be/jd5giyXReal>
- 1. Ensure you read all instructions and objectives before starting.
- 2. Create a new branch from qa called M6-Homework
 - 1. `git checkout qa` (ensure proper starting branch)
 - 2. `git pull origin qa` (ensure history is up to date)
 - 3. `git checkout -b M6-Homework` (create and switch to branch)
- 3. Copy the template code from here: [GitHub Repository - M6 Homework](#)
 - It includes Problems 1-3 and `base.php`. Put all into an M6 folder or similar inside your `public_html`
 - Immediately record to history
 - `git add public_html`
 - `git commit -m "adding M6 HW baseline files"`
 - `git push origin M6-Homework`
 - Create a Pull Request from M6-Homework to dev and keep it open
- 4. Fill out the below worksheet
 - Each Problem requires the following as you work
 - Ensure there's a comment with your UCID, date, and brief summary of how the problem was solved
 - Initial outline/plan of how you'll solve it via comments (add/commit after this stage)
 - Code solution (add/commit periodically as needed)
- 5. Once finished, click "Submit and Export"
- 6. Locally add the generated PDF to a folder of your choosing inside your repository folder and move it to Github
 - 1. `git add .`
 - 2. `git commit -m "adding PDF"`
 - 3. `git push origin M6-Homework`
 - 4. On Github merge the pull request from M6-Homework to qa
 - 5. On Github create a pull request from qa to prod and immediately merge. (This will trigger the prod deploy to make the render.com prod links work)

7. Upload the same PDF to Canvas

8. Sync Local

1. git checkout qa
2. git pull origin qa

Section #1: (2.5 pts.) Problem 1 - Subset

Progress: 100%

≡ Task #1 (2.50 pts.) - Edit the `processBirds` function to extract properties

Progress: 100%

Details:

- Only make edits where noted via provided comments
- Challenge: Extract the name, color, region of each bird into the \$subset array
- Step 1: sketch out plan using comments (include ucid and date)
- Step 2: Add/commit your outline of comments (required for full credit)
- Step 3: Add code to solve the problem (add/commit as needed)

Part 1:

Progress: 100%

Details:

Two screenshots are expected

1. Snippet of relevant code showing solution (with ucid/date comment)
2. Full output of executing the program (visit the proper file on Render.com qa after a manual deploy)

```
// pbp5, 3/28/2026
// Step 1: Iterate through $birds
// Step 2: Extract name, color, and region
// Step 3: Create a associative array for each attribute
// Step 4: Add each attribute array into $subset

// Note: use the $birds variable to iterate over, don't directly touch $a1-$a4
// [100] Objective: Extract the name, color, region into a separate multi-dimension array called $subset
$subset = []; // result array
// Start edits
foreach ($birds as $bird) {
    $subset[] = [
        "name" => $bird["name"],
        "color" => $bird["color"],
        "region" => $bird["region"]
    ];
}
// End edits
```

Part 3:

Progress: 100%

Details:

Briefly explain how your solution works. Describe the logic, steps, or decisions your code makes to reach the result. Do not restate the problem or list requirements.

Your Response:

Iterate through \$birds array and for each bird, extract the name, the color, and region. For each of these attributes, we then create store these attributes into their own respective associative arrays. The we add these arrays into \$subset.

Section #2: (2.5 pts.) Problem 2 - Adding Properties

Progress: 100%

- Only make edits where noted via provided comments
- Challenge 1: Add a new property called `age` that's set from today's year and the car's year
- Challenge 2: Add a new property called `isClassic` that's true/false based on `$classic_age`
- Step 1: sketch out plan using comments (include `ucid` and `date`)
- Step 2: Add/commit your outline of comments (required for full credit)
- Step 3: Add code to solve the problem (add/commit as needed)

Progress: 100%

1. Snippet of relevant code showing solution (with ucid/date comment)
2. Full output of executing the program (visit the proper file on Render.com qa after a manual deploy)

Part 3:

Progress: 100%

Details:

Briefly explain how your solution works. Describe the logic, steps, or decisions your code makes to reach the result. Do not restate the problem or list requirements.

Your Response:

First we get the current year, then iterate through the \$cars array. We calculate the age for each car in the array and with this determine if the car is classic. Then we create a new array with the updated attributes and store these arrays in the \$processedCars array.

Section #3: (2.5 pts.) Problem 3 - Join

Progress: 100%

Task #1 (2.50 pts.) - Edit the `joinArrays` function to combine two arrays based on a common key

Progress: 100%

Details:

- Only make edits where noted via provided comments
- Challenge: Combine the data in both arrays by the userId property

- Step 1: sketch out plan using comments (include ucid and date)
- Step 2: Add/commit your outline of comments (required for full credit)
- Step 3: Add code to solve the problem (add/commit as needed)

Part 1:

Progress: 100%

Details:

Two screenshots are expected

1. Snippet of relevant code showing solution (with ucid/date comment)
2. Full output of executing the program (visit the proper file on Render.com qa after a manual deploy)

```
// php5, 7/28/2026
// Step 1: Iterate through $users
// Step 2: Find the activity with the same userID for every user
// Step 3: Merge user data and activity into an associative array
// Step 4: Add the associative array into $joined

// Note: use the $users and $activities variables to iterate over, don't directly touch $a1-$a4 arrays
// TODO Objective: Add logic to join both arrays on the userID property into one $joined array
$joined = []; // result array
// Start edit
foreach ($users as $user) {
    foreach ($activities as $act) {
        if ($user["userid"] == $act["userid"]) {
            $joined[] = array_merge($user, $act);
            break;
        }
    }
}
// End edit
echo "<pre>" . var_export($joined, true) . "</pre>";
```

Task #2 (0.83 pts.) - WakaTime - Activity

Progress: 100%

Details:

- Visit the WakaTime.com Dashboard
- Click Projects and find your repository
- Capture the overall time at the top that includes the repository name
- Capture the individual time at the bottom that includes the file time
- Note: The duration isn't relevant for the grade and the visual graphs aren't necessary

≡ Task #3 (0.83 pts.) - Reflection

Progress: 100%

⇒ Task #1 (0.33 pts.) - What did you learn?

Progress: 100%

Details:

Briefly answer the question with at least a few reasonable sentences

Your Response:

We learned how to create muti-dimenstional arrays and joing asscoiavte arrays together to make them.

Saved: 3/28/2026 4:14:39 PM

⇒ Task #2 (0.33 pts.) - What was the easiest part of the assignment?

Progress: 100%

Details:

Briefly answer the question with at least a few reasonable sentences

Your Response:

Problem 1 was pretty easy to implement. TOverall this assignment was not too difficult in general.

Saved: 3/28/2026 4:16:01 PM

⇒ Task #3 (0.33 pts.) - What was the hardest part of the assignment?

Progress: 100%

Details:

Briefly answer the question with at least a few reasonable sentences

Your Response:

My output was differing in problem 2, the age of the cars kept showing one more than necessary, but that was a simple fix. Problem 3 was a bit tricky as we had to merge two arrays.
