

Submission Worksheet

Submission Data

Course: IT202-010-S2026

Assignment: IT202 Module 4 SQL Challenge

Student: Pratik P. (pbp5)

Status: Submitted | **Worksheet Progress:** 100%

Potential Grade: 10.00/10.00 (100.00%)

Received Grade: 0.00/10.00 (0.00%)

Started: 3/27/2026 2:41:53 PM

Updated: 3/27/2026 5:44:06 PM

Grading Link: <https://learn.ethereallab.app/assignment/v3/IT202-010-S2026/it202-module-4-sql-challenge/grading/pbp5>

View Link: <https://learn.ethereallab.app/assignment/v3/IT202-010-S2026/it202-module-4-sql-challenge/view/pbp5>

Instructions

- Overview Link: <https://youtu.be/oW7AK39mgmo>
- 1. Ensure you read all instructions and objectives before starting.
- 2. Create a new branch from qa called M4-Homework
 - 1. `git checkout qa` (ensure proper starting branch)
 - 2. `git pull origin qa` (ensure history is up to date)
 - 3. `git checkout -b M4-Homework` (create and switch to branch)
- 3. Copy the template code from here: [GitHub Repository - M4 Homework](#)
 - Put all into an M4 folder inside your `public_html`
 - Expected files
 - `sql/000_create_table_todos.sql`
 - `sql/init_db.php`
 - `todos/create.php`
 - `todos/pending.php`
 - `todos/completed.php`
 - `nav.php`
 - two index files (M4 and todos)
 - Immediately record to history
 - `git add public_html`
 - `git commit -m "adding M4 HW baseline files"`
 - `git push origin M4-Homework`
 - Create a Pull Request from M4-Homework to qa and keep it open
- 4. Fill out the below worksheet
 - Each Problem requires the following as you work
 - Ensure there's a comment with your UCID, date, and brief summary of how the problem was solved
 - Update ucid in `nav.php` where noted
 - Code solution (add/commit periodically as needed) (refer to comments in the create, pending,

completed files)

5. Once finished, click "Submit and Export"

6. Locally add the generated PDF to a folder of your choosing inside your repository folder and move it to Github

1. git add .

2. git commit -m "adding PDF"

3. git push origin M4-Homework

4. On Github merge the pull request from M4-Homework to qa

5. On Github create a pull request from qa to prod and immediately merge. (This will trigger the prod deploy to make the render.com prod links work)

7. Upload the same PDF to Canvas

8. Sync Local

1. git checkout qa

2. git pull origin qa

Section #1: (1 pt.) Prep

Progress: 100%

Details:

Once the files are copied in, run your local PHP server and visit /M4/sql/init_db.php in the browser to trigger the table generation.

Task #1 (0.50 pts.) - Show the output of the init_db.php tool

Progress: 100%

Details:

The output should note either successfully executed or skipped (if you ran this already)

output

Saved: 3/27/2026 4:25:17 PM

Task #2 (0.50 pts.) - Show the project view of your editor to show all files are present

Progress: 100%

Your Response:

Task is VARCHAR as it stores text, due is DATE and stores dates, and assigned is VARCHAR and identifies who the task is assigned to. If assigned is left empty, it is assigned self by default.

Saved: 3/27/2026 3:25:26 PM

☰ Task #2 (0.75 pts.) - Form Submission PHP Validations

Progress: 100%

📁 Part 1:

Progress: 100%

Details:

- Validate the incoming data for correct format based on the SQL table definition.
- When not valid, provide a user-friendly message of what specifically was wrong and set `$is_valid` to false
- Assigned should check for "self" if a valid format/value isn't provided; it should default to "self" if all checks for this property fail
- Include screenshot(s) from Render.com QA demonstrating each validation (ensure URL is visible)

```
$is_valid = true;
// TODO: Validate the incoming data for correct format based on the SQL table definition.
// When not valid, provide a user-friendly message of what specifically was wrong and set $is_valid to false.
// Assigned should check for "self" if a valid format/value isn't provided.
// Start validations
// can edit here
if (empty($task)) {
    echo "Task cannot be empty";
    $is_valid = false;
}

if (empty($due) || !DateTime::createFromFormat('Y-m-d', $due)) {
    echo "Due date must be in YYYY-MM-DD format";
    $is_valid = false;
}

if (empty($assigned)) {
    $assigned = "self";
}
// End validations
```

php validations

Saved: 3/27/2026 3:30:23 PM

☰ Part 2:

Progress: 100%

Details:

Briefly explain your validation logic.

Your Response:

An error message is displayed if task is left empty and `is_valid` is set to false. An error message is displayed if due is left empty or if it is in the incorrect format, and `is_valid` is set to false. If assigned is left empty, it is set to self, `is_valid` is not changed.

Saved: 3/27/2026 3:30:23 PM

☰ Task #3 (0.75 pts.) - Show the code snippet related to the INSERT query

Progress: 100%

📎 Part 1:

Progress: 100%

Details:

Design a query to insert the incoming data to the proper columns. Ensure valid and proper PDO named placeholders are used. <https://phpdelusions.net/pdo>

```
if ($is_valid) {  
    /*  
     * Design a query to insert the incoming data to the proper columns.  
     * Ensure valid and proper PDO named placeholders are used.  
     * https://phpdelusions.net/pdo  
     */  
    $query = "INSERT INTO todos (task, due, assigned)  
             VALUES (:task, :due, :assigned)";  
    $params = [  
        ":task" => $task,  
        ":due" => $due,  
        ":assigned" => $assigned  
    ];  
    try {  
        $stmt = $pdo->prepare($query);  
        $stmt->execute($params);  
    } catch (PDOException $e) {  
        // Handle the error  
    }  
}
```

query

Saved: 3/27/2026 3:34:55 PM

☰ Part 2:

Progress: 100%

Details:

Briefly describe how the query works in plain words.

Your Response:

The query inserts a new to-do item into todos for values task, due, and assigned. Placeholders are used before being assigned their appropriate values.

Saved: 3/27/2026 3:34:55 PM

☰ Task #4 (+ 1.01 pts.) - Extra Credit: Handle Unique Constraint Errors

Progress: 0%

📎 Part 1:

Progress: 0%

Progress: 0%

Details:

Show the code related to handling the unique constraint errors and the user-friendly message

Missing Caption

Saved: 3/26/2026 1:17:27 PM

≡ **Part 2:**

Progress: 0%

Details:

Briefly explain how your solution works. Describe the logic, steps, or decisions your code makes to reach the result. Do not restate the problem or list requirements.

Your Response:

Missing Response

Saved: 3/26/2026 1:17:27 PM

⇒ **Task #5 (0.75 pts.) - Create Page URLs**

Progress: 100%

Details:

- Direct link to the file in the homework-related branch from Github (should end in .php,, zero credit if it does not)
- Direct link to the file on Render.com Prod (Grab the qa url you're testing, paste it, change "-qa" to "-prod"), zero credit if not prod

URL #1

Section #3: (3 pts.) Pending Page

Progress: 100%

Task #1 (1 pt.) - Fetching Todos

Progress: 100%

Part 1:

Progress: 100%

Details:

- Refer to the HTML table in the given code and build a query that'll select the columns in the same order as the table from the Todo table
- Cross-reference the HTML table columns with what'd most plausibly match the SQL table, aside from the notes below
- For the Status part, you'll need to calculate the "days_offset" from the due date, ensure the virtual column matches "days_offset"
- For Actions, this isn't part of the query, and there's nothing special to select for it
- Filter the results where the todo item is NOT completed and order the results by those due soonest
- No limit is required
- Include screenshot(s) from Render.com QA demonstrating 5 different records (ensure URL is visible)

```
/* Refer to the HTML table below and build a query that'll select the columns in the same order as the table from the Todo table.
Cross-reference the HTML table columns with what'd most plausibly match the SQL table aside from the notes below.
For the Status part, you'll need to calculate the "days_offset" from the due date, ensure the virtual column matches "days_offset".
For Actions, this isn't part of the query and there's nothing special to select for it.
Filter the results where the todo item is NOT completed and order the results by those due the soonest.
No limit is required.
*/
$query = "SELECT
    id,
    task,
    due,
    DATEDIFF(due, CURRENT_DATE) AS days_offset,
    assigned
FROM MM_Todos
WHERE is_complete = 0
ORDER BY due ASC"; // edit this
$results = [];
```

fetching todos query

Saved: 3/27/2026 5:37:45 PM

Part 2:

Progress: 100%

Details:

Briefly describe how the query works in plain words.

Your Response:

Retrieves incomplete items in todos and selects id, task, due and the person it is assigned to. Also selects the date offset by finding the difference between due and the current date and orders by closest due date.

Saved: 3/27/2026 5:37:45 PM

≡ Task #2 (1 pt.) - Completing Todos

Progress: 100%

📁 Part 1:

Progress: 100%

Details:

- Create a query that'll update the respective ToDo, marking it complete and setting the date for the completed date field as today
- Ensure the "id" is utilized using proper PDO named placeholders so that only the one item is updated
- Add an extra clause to update only if the complete field of the record is not set

```
/*  
Create a query that'll update the respective ToDo marking it complete and setting the date for the completed date field as today.  
Ensure the "id" is utilized using proper PDO named placeholders so that only the one item is updated.  
Add an extra clause to update only if the complete field of the record is not set.  
https://phpdelusions.net/pdo  
*/  
$query = "UPDATE M4_Todos  
        SET is_complete = 1, completed = CURRENT_DATE  
        WHERE id = :id AND is_complete = 0"; // edit this  
$params = [  
    "id" => $id  
];
```

completing todos query

Saved: 3/27/2026 5:38:14 PM

≡ Part 2:

Progress: 100%

Details:

Briefly describe how the query works in plain words.

Your Response:

Updates tasks with matching id and where completed is set to 0 and sets completed to 0 and the completed date to the current date.

Saved: 3/27/2026 5:38:14 PM

Task #3 (1 pt.) - Pending Page URLs

Progress: 100%

Details:

- Direct link to the file in the homework-related branch from GitHub (should end in .php, , zero credit if it does not)
- Direct link to the file on Render.com Prod (Grab the qa url you're testing, paste it, change "-qa" to "-prod"), zero credit if not prod

Section #4: (2 pts.) Completed Page

Progress: 100%

Task #1 (1 pt.) - Fetching Todos

Progress: 100%

Part 1:

Progress: 100%

Details:

- Refer to the HTML table below and build a query that'll select the columns in the same order as the table from the Todo table
- Cross-reference the HTML table columns with what'd most plausibly match the SQL table, aside from the notes below
- For the completed date, you'll need to extract the date portion from the completed column
- For the Status part, you'll need to calculate the "days_offset" from the completed date, ensure the virtual column matches "days_offset"
- Filter the results where the todo item is completed and order the results by most recently completed and most recently due
- No limit is required
- Include screenshot(s) from Render.com QA demonstrating 5 different records (ensure URL is visible)

/* Refer to the HTML table below and build a query that'll select the columns in the same order as the table from the Todo table. Cross-reference the HTML table columns with what'd most plausibly match the SQL table aside from the notes below.

For the completed date you'll need to extract the date portion from the completed column.
 For the Status part, you'll need to calculate the "days_offset" from the completed date, ensure the virtual column matches "days_offset".
 Filter the results where the todo item is completed and order the results by most recently completed and most recently due.
 No limit is required.

```
//
$query = "SELECT
  id,
  task,
  due,
  DATE(completed) AS completed,
  DATEDIFF(completed, due) AS days_offset,
  assigned
FROM PM_Todos
WHERE is_complete = 1
ORDER BY completed DESC, due DESC"; // edit this
```

Results = 11

fetching todos

 Saved: 3/27/2026 5:38:48 PM

⇒ Part 2:

Progress: 100%

Details:

Briefly describe how the query works in plain words.

Your Response:

The query retrieves tasks that are completed and selects the id, task, due date, completed date, who it is assigned to, and the days offset and orders by completed date.

 Saved: 3/27/2026 5:38:48 PM

⇒ Task #2 (1 pt.) - Completed Page URLs

Task #3 (0.33 pts.) - Reflection

Progress: 100%

Task #1 (0.33 pts.) - What did you learn?

Progress: 100%

Details:

Briefly answer the question (at least a few decent sentences)

Your Response:

We learned how to create database tables, insert information into those tables, and the ability to use queries to fetch information.

Saved: 3/27/2026 5:40:45 PM

Task #2 (0.33 pts.) - What was the easiest part of the assignment?

assignment?

Progress: 100%

Details:

Briefly answer the question (at least a few decent sentences)

Your Response:

The easiest part of the assignment was making the logic behind the queries and making the queries.

Saved: 3/27/2026 5:42:36 PM

⇒ Task #3 (0.33 pts.) - What was the hardest part of the assignment?

Progress: 100%

Details:

Briefly answer the question (at least a few decent sentences)

Your Response:

I had ran into issues with creating todos and I had to look back to see what was wrong. Spent a couple of minutes trying to figure out why I kept running into an error but turns out I had just misspelled M4_Todos in the queries.

Saved: 3/27/2026 5:44:06 PM
